Individual semantic emergence

Discretized¹ generalized state for different derivatives of time forms the alphabet of words by which each individual agent can describe the experiences it is practicing to other agents²

$$w = \{\alpha^{(0)}, \dots, \alpha^{(L)}\} \quad (1)$$

¹Fiser, D., Faigl, J., & Kulich, M. (2013). Growing neural gas efficiently.

Collective semantic emergence

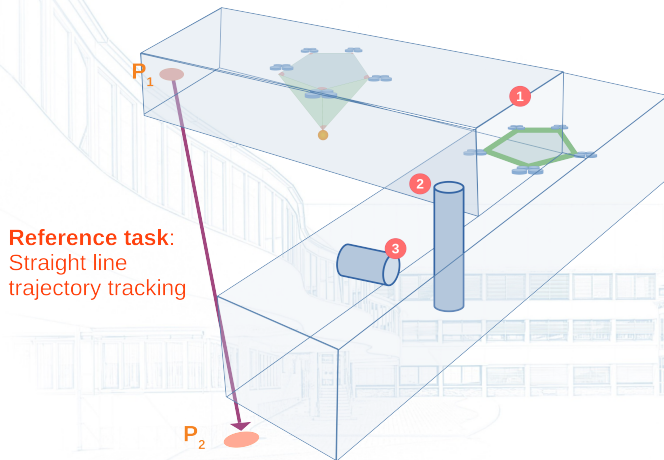

Mutually activated discretized generalized state space for the collective language³

Words are
synchronously
activated
Zones in the
absence of
repulsive forces
